Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

In a user registration system, there is a requirement to implement a username validation module. Users attempting to register must adhere to specific criteria for their usernames to be considered valid.

Your task is to develop a program that takes user input for a desired username and validates it according to the following rules:

The username must not contain any spaces. The username must be at least 5 characters long.

Implement a custom exception, `InvalidUsernameException`, to handle cases where the entered username does not meet the specified criteria.

Input Format

The input consists of a string S, representing the desired username.

Output Format

If the username is valid, print "Username is valid: [S]".

If the username is invalid:

1. If the username is short, print "Invalid Username: Username must be at least 5 characters long"
2. If the username contains spaces, print "Invalid Username: Username cannot contain spaces"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: John

Output: Invalid Username: Username must be at least 5 characters long

Answer

```
// You are using Java
import java.util.Scanner;
class InvalidUsernameException extends Exception
{
    public InvalidUsernameException(String s)
    {
        super(s);
    }
}
class Main
{
    public static void name(String s) throws InvalidUsernameException
    {
        int l=s.length();
        if(l<5)
        {
            throw new InvalidUsernameException("Username must be at least 5
characters long");
        }
    }
}
```

```

else
{
    for(int i=0;i<l;i++)
    {
        if(s.charAt(i)==' ')
        {
            throw new InvalidUsernameException("Username cannot contain
spaces");
        }
    }
}
System.out.print("Username is valid: "+s);
}
public static void main(String[] args)
{
    try
    {
        Scanner sc=new Scanner(System.in);
        String s=sc.nextLine();
        name(s);
    }
    catch(InvalidUsernameException e)
    {
        System.out.print("Invalid Username: "+e.getMessage());
    }
}
}

```

Status : Correct

Marks : 10/10
